

# Fish Family Matching Game

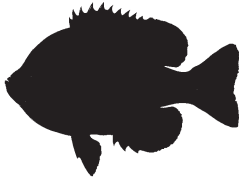

Fish are the most diverse vertebrate group with over 20,000 different species! The closely related species are grouped into families. Often, related fish have similar external anatomy. Using a fish's outside body parts (i.e. body shape and fin structures) as a guide, match the fish with its appropriate relative. For example, the redfin pickerel and the chain pickerel match to form the Pike family.

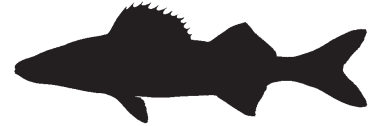

Name: Redfin pickerel  
Family: Pike

Name: Common carp  
Family: ?

Name: Bluegill  
Family: Sunfish

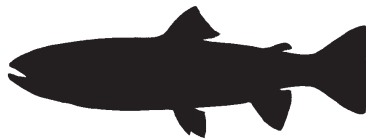

Name: Walleye  
Family: ?
