

SNAPPING TURTLE MAZE

Snapping turtles can weigh over 30 lbs. and live up to 30 years! They only live in fresh or brackish water. Snapping turtles prefer water bodies with muddy bottoms and vegetation because they can camouflage better. Their diet consists of aquatic animals such as fish, and they are also scavengers and will eat decaying material. Snapping turtles can be found as far north as Canada and Nova Scotia and as far south as the Gulf of Mexico and Texas.

Try to navigate through the snapping turtle below!
